City: Medellín - Colombia

PROFESSIONAL SUMMARY

Software and Data Developer with over 3 years of experience specializing in the design, development, and ingestion of large-scale data pipelines and complex automation workflows. Strong knowledge of workflow orchestration with Apache Airflow, Python scripting, SQL query optimization, and containerized environments using Docker. Focused on building scalable solutions, database integration, and transforming data-intensive processes into efficient architectures.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, VBScript, JavaScript.
- **Orchestration & Automation:** Apache Airflow, Selenium, Playwright, Robocorp, UiPath, OCR, ETL
- **Data Processing:**Pandas, BeautifulSoup.
- **DevOps:** Docker, Docker Compose, Git, GitHub.
- **Web Frameworks:** Django.
- **Databases:** PostgreSQL, SQL.
- **Integrations:** SAP.

PROFESSIONAL EXPERIENCE

Data & Automation Developer – Data Finanzas

Feb 2024 – Present

- Led the full lifecycle of data ingestion and orchestration projects, from architecture planning and Python development to containerized deployment and continuous monitoring.
- Designed and implemented automation pipelines using Apache Airflow, improving infrastructure and workflows to increase system capacity from 10 to over 100 simultaneous instances.
- Built reliable and maintainable automation pipelines, reducing manual work and ensuring high system reliability.

Python Developer – Data Integration (INTERNSHIP) – Maaji

May 2023 – Nov 2023

- Provided support and maintenance for automation bots responsible for data transfer and transformation.
- Collaborated on improving RPA solutions to increase efficiency and reduce manual workload.

FEATURED PROJECTS

AI-Assisted System Refactoring & Backend Architecture

- Designed a new modular structure using Django for service management and PostgreSQL for storing logs and process states.
- Implemented an AI multi-agent system to automate legacy code modernization, maintaining technical consistency through the use of agent.md and skills.
- Optimized complex SQL queries, improving system response times during the integration of new modules.

Automation & Data Layer Architecture Redesign (Core Company Project)

- Led the migration and architecture redesign of the company's automation and data ingestion layer, implementing Apache Airflow and Object-Oriented Programming (OOP).
- Designed modular workflows for large-scale data processing, ensuring maintainability and operational scalability.

Large-Scale Data Ingestion Pipeline for Insurance Companies

- Developed a scalable solution using Airflow, Docker, and Selenium Grid for the automated daily extraction and download of large volumes of data.
- Applied object-oriented design to ensure modularity and simplify the integration of new data sources.

Support Document Generation in Siigo (Itagüí City Hall)

- Automated accounting workflows using Selenium, Pandas, and Python, reducing errors in the generation and validation of financial documents.

CERTIFICATIONS

- Agile Project Management with Jira (Scrum & Kanban)
- Python Programming Specialization – Platzi
- Introduction to Backend Development – Platzi
- UiPath Certified Training – UiPath Academy
- Robocorp Certification

EDUCATION

ITM (Metropolitan Technological Institute) - Medellín, Colombia

Software Development Engineering | 2026 – Present (In Progress)

Cesde – Medellín, Colombia

Technical Degree in Software Development | Completed in 2023

LANGUAGES

- Spanish: Native
- English: B1

PROFESSIONAL INTERESTS

Large-scale data handling and processing in orchestrated workflows, backend development focused on data architecture, integration with cloud services (AWS, GCP, Azure), and the use of artificial intelligence to improve and modernize processes.
